### How do I apply the acrylic and metal polish?

Wet-sanding with sandpaper (only for acrylic), apply and rub with damp sponge, clean with soft cloth. Done!

# CORDLESS IS KING

More power, longer battery life and no cables: the new generation of cordless power tools, make work easy, even if there is no electricity socket available. Battery life and the actual performance of these tools, has made a huge leap in recent years. Cordless power tools are now an alternative for a whole range of users.

Whether on construction sites, or for plumbing, HVAC, janitor services, firefighting, road service and other mobile units, cordless power tools are now considered an essential piece of equipment.

## Important:

Please note that our cordless powertool accessories are also suitable for variable-speed angle grinders.

## Why special tools?

Cordless power tools are commonly used by mobile services, where the full range of accessories is not available. Users therefore need universal tools which can tackle a variety of tasks on different materials. In this way the amount of accessories to be carried along on a construction site can be reduced when working on steel, stainless steel and wood.

Commonly cordless angle grinders run with a 30% reduced working speed compared to usual angle grinders. Having specifically developed accessories for cordless power tools in use means that the perfect result of brushes, grinding- or cutting discs can be reached with a speed of 7,000 to 8,000 RPM. Osborn Brushes are lighter and therefore prolong the battery life between recharges by 20-25%.

## Advantages

- Low weight
- Precise working
- Multifunctional
- Easy to handle
- Reduced imbalance and vibration
- Longer battery life (20-25%)
- Fewer charging cycles
- Universal usage on all materials
- Can be used for different materials

# WE MAKE IT EASY FOR YOU!

OSBORN has developed accessories which are flexible in use, light weight, easy to handle and assure highest precision.

The end result will meet all your expectations and fulfill all aspects of work safety. This is the only way to work effectively and get the best out of your cordless power tool.

## FOLDED BUFFS SISAL/CLOTH AND FLEECE

**SUPERIOR** ★★★★★

Folded buffs made of impregnated sisal/cloth or NOTIFLEX® fleece (hard) or NOTIFLEX® fleece (soft). Diameter 100 mm with M14 thread for easy mounting on variable-speed angle grinders and cordless tools. For cutting, polishing and colouring.

- Single buffs packed in PET with euro hole
- Short application description on the packaging

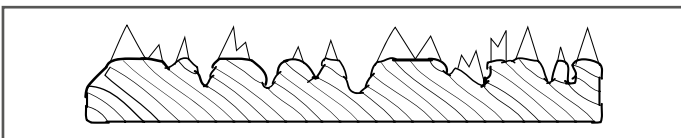

**Important:**

Recommended working speed on cordless powertools is 3,500 min<sup>-1</sup> or level 1 for variable-speed angle grinders. Add polishing compound continuously.

### APPLICATION GUIDE:

#### CUTTING WITH SISAL/CLOTH

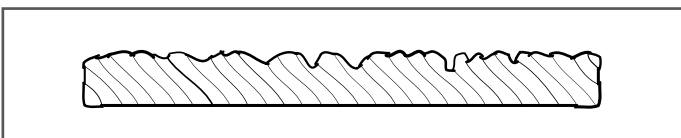

- Use polishing compound white for stainless and steel and brown for aluminium
- For brass and copper start with step 2 - polishing

Removing defects and scratches

#### POLISHING WITH NOTIFLEX® FLEECE HARD

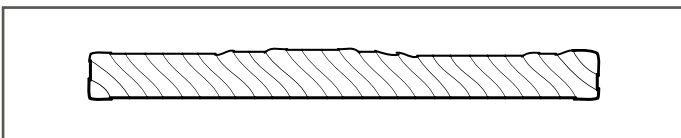

- Use polishing compound white for steel and stainless
- For brass, copper and aluminium please use brown

Removing traces of cutting and blending the surface

#### COLOURING WITH NOTIFLEX® FLEECE SOFT

- Use polishing compound blue for all materials

Create a high-gloss surface
