- Special formulas for chrome, lacquer, aluminium rims, stainless steel, silver and jewellery
- Water soluble
- Silicon-free

Premium Polishes Automotive

CHROME

Art.-No. L979012103

The appeal of a classic car lies in its shiny chrome surface. This makes it all the more annoying when there is dirt, grease marks, oil or fingerprints on the trim, fittings or veneers, disturbing that final finish. The StarPolish Premium Chrome Polishing Paste removes all of these impurities on the chrome parts and provides a streak-free shine.

CAR FINISH

Art.-No. L979940340

The perfect finish for your car paint. Small scratches and scrapes are removed. Traces of paint, rust and chafe marks, as well as drips, can be eliminated. Coatings retain their original gloss. The StarPolish Premium polishing paste also preserves the surface and protects against fading.

ALUMINIUM RIMS

Art.-No. L979002103

Highly polished aluminium rims are a must for every sports car owner. However over time they accumulate unsightly brake dust, dirt, tar splashes and deposits. High-pressure cleaners are usually not able to remove all of this dirt. The StarPolish Premium Polishing Paste for aluminium is material-friendly, acid-free and non-corrosive. It is suitable for all polished aluminium surfaces, removes traces of oxidation and gives the required shine.

STAR POLISH

PREMIUM POLIERPASTE

EASY TO USE

Art.-No. L979600002

Apply and rub with a damp sponge, polish with a soft cloth. Done!

STAINLESS STEEL

Art.-No. L979022104

Stainless steel - has a whole range of uses in the household, mainly because it is hygienic and has no tendency to rust. Whether stainless steel profiles, fittings, sinks or tableware - we like to see them shine. Using StarPolish Premium polishing paste, stubborn grease marks, scratches or traces of lime can all be removed, leaving a streak-free shine. A protective film remaining on the surface hinders unsightly fingerprints.

SILVER

Art.-No. L979012104

Silver is a precious and timelessly beautiful metal. Silver cutlery gives a table a festive character. An old coin delights the collector, as an exhibit or a valuable asset. Over time silver does become tarnished, turning grey, black or dull, as a stubborn layer of silver sulphide forms on the surface. The StarPolish Premium polishing paste for silver gently cleanses the dark spots and returns the silver to its original gloss.

JEWELLERY

Art.-No. L979002104

Good care must be taken of high quality jewellery. In particular, 333 alloys are more susceptible to tarnishing than 585 or 750 alloys due to the lower percentage of gold. Contact points or fine scratches can be removed with the StarPolish Premium polishing paste without damaging the surface of the jewellery. Your jewellery shines as if it were new.

Premium Polishes Household

Cleans, polishes and protects in one step
